

Dear Participant,

In some of the sessions you will be required to use a terminal. To follow through these sessions, you will need to have either a macbook or Linux operating system. For those with windows, follow the instructions below to have a terminal on your computer

If your computer runs Windows, you can get **Cygwin** (which should be introduced during the training). We will show you here how to install Cygwin so that you can get familiar with the interface before the sessions begin.

If you are running **Windows 10 version 16215.0 or higher**, then getting a minimal installation of linux on your computer is a lot easier.

1. Go to **App Store**
2. Search **Ubuntu**
3. Click to **install** (any version of Ubuntu will do)
4. Once installed, search Ubuntu and **launch** it

### **How to install Cygwin on your Windows computer**

There are several options for getting linux on your computer without necessarily removing your Windows installation. However, these will only give you a minimal installation which should be enough to get you through the training. We will show you how to get Cygwin. Feel free to install any other simulator/emulator of your choice.

### **Installing Cygwin**

1. Go to <https://www.cygwin.com/install.html> or copy and paste the link in your browser
2. Click to download a setup based on your computer architecture [64-bit (x86\_64) or 32-bit (x86)].

# Cygwin

Get that [Linux](#) feeling - on Windows

## Installing and Updating Cygwin Packages

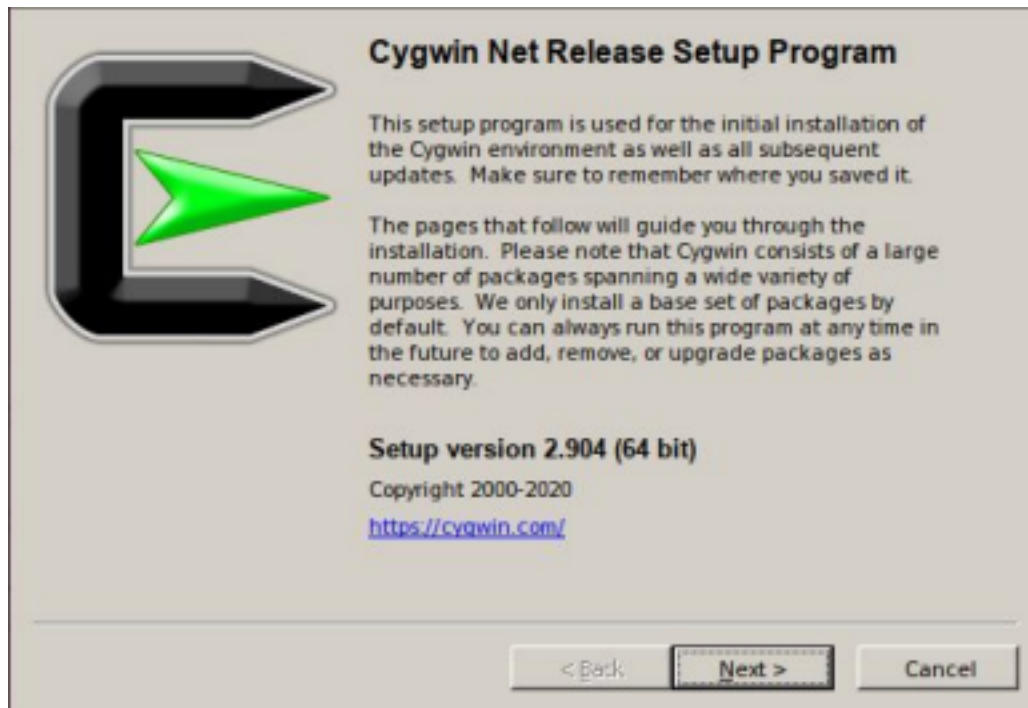

### Installing and Updating Cygwin for 64-bit versions of Windows

Run [setup-x86\\_64.exe](#) any time you want to update or install a Cygwin package for 64-bit windows.  
binary.

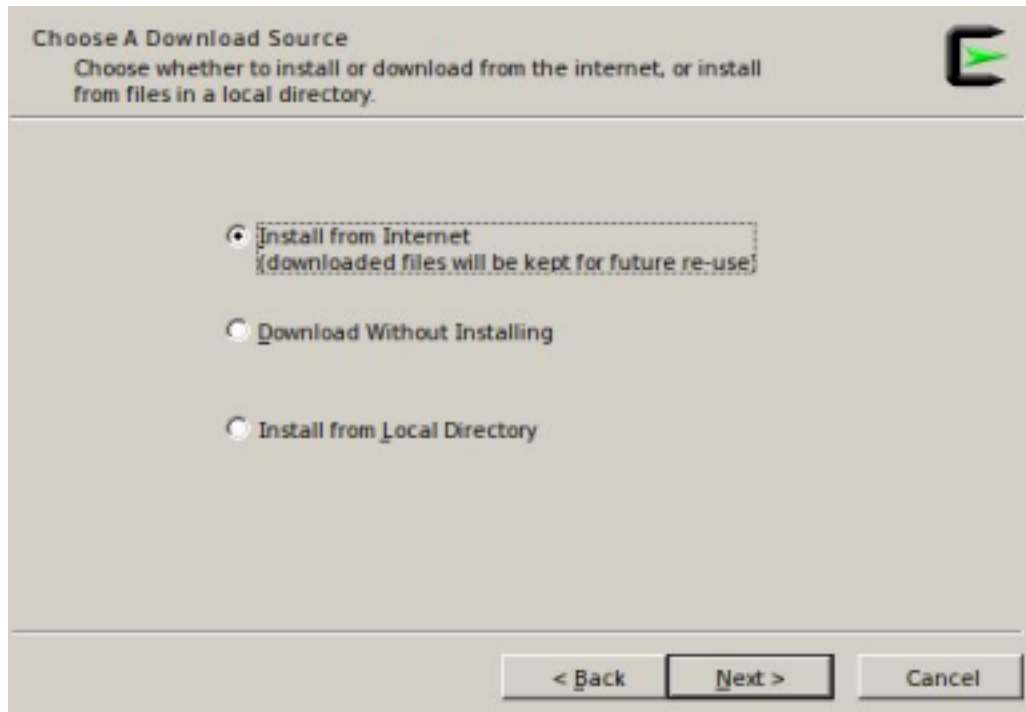

### Installing and Updating Cygwin for 32-bit versions of Windows

Run [setup-x86.exe](#) any time you want to update or install a Cygwin package for 32-bit windows. Th

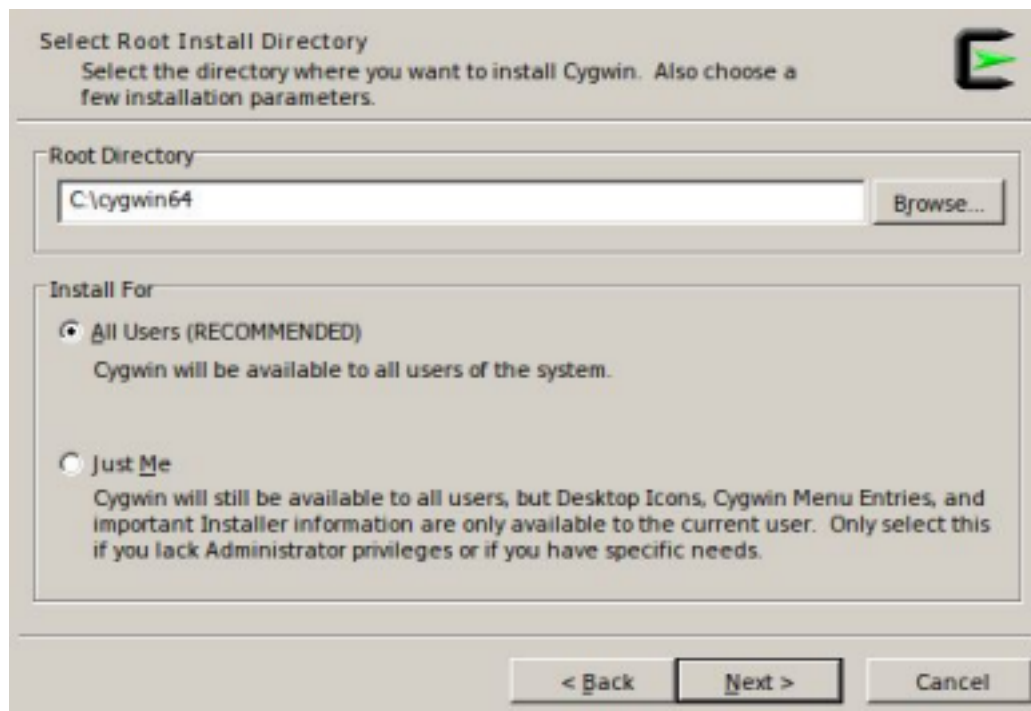

3. Run the installer (setup) Click next

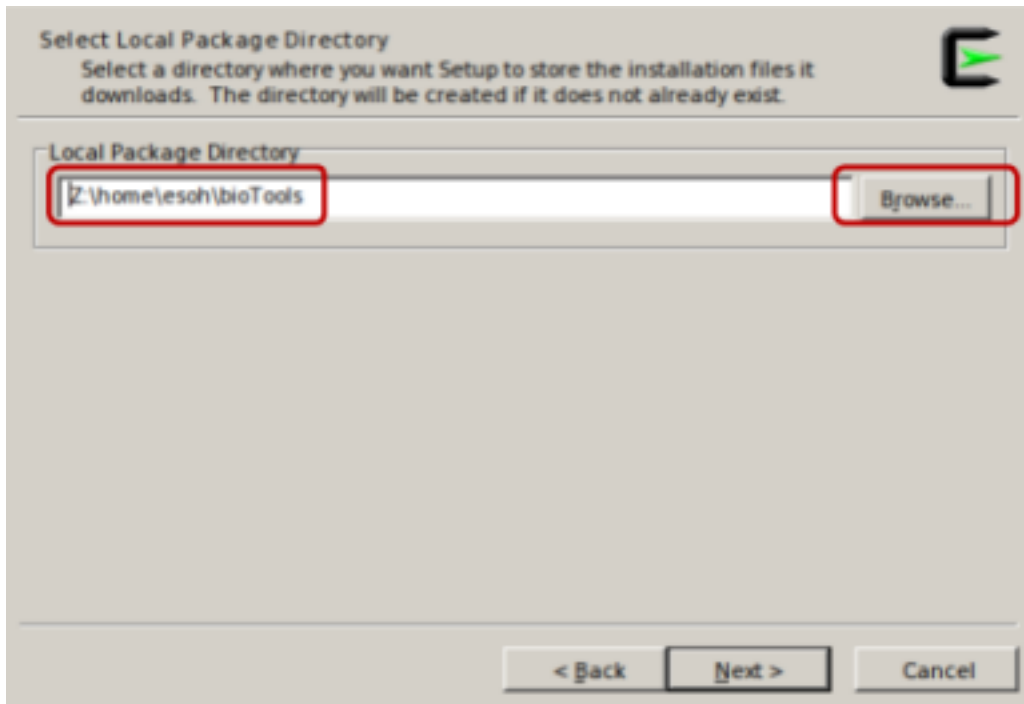

4. Click next

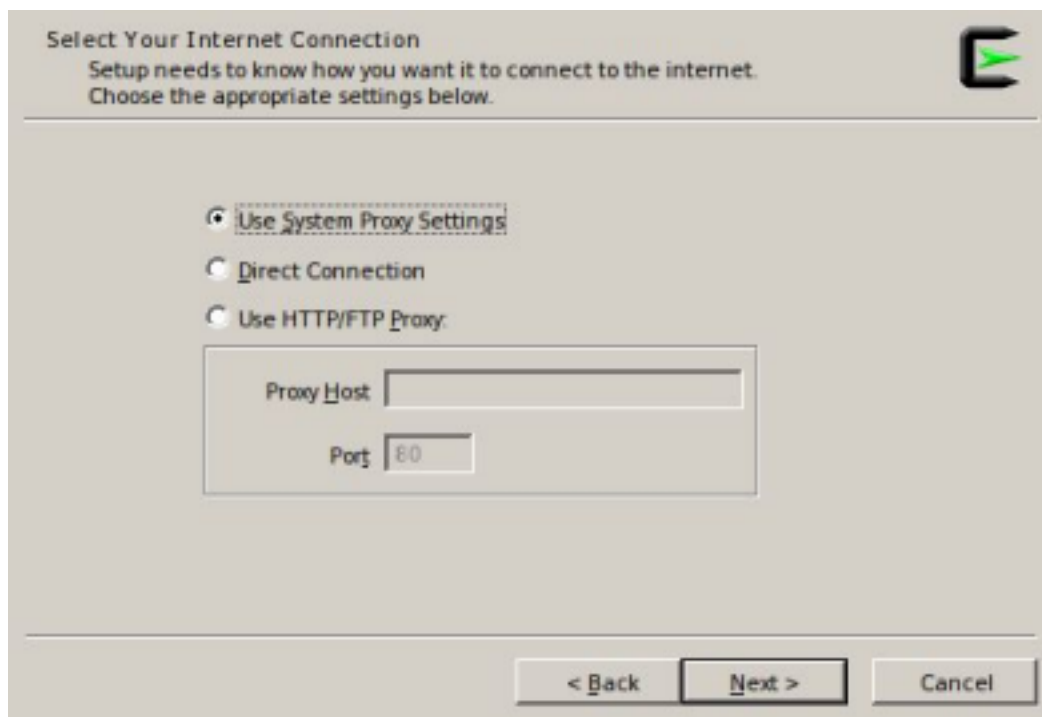

5. Click next

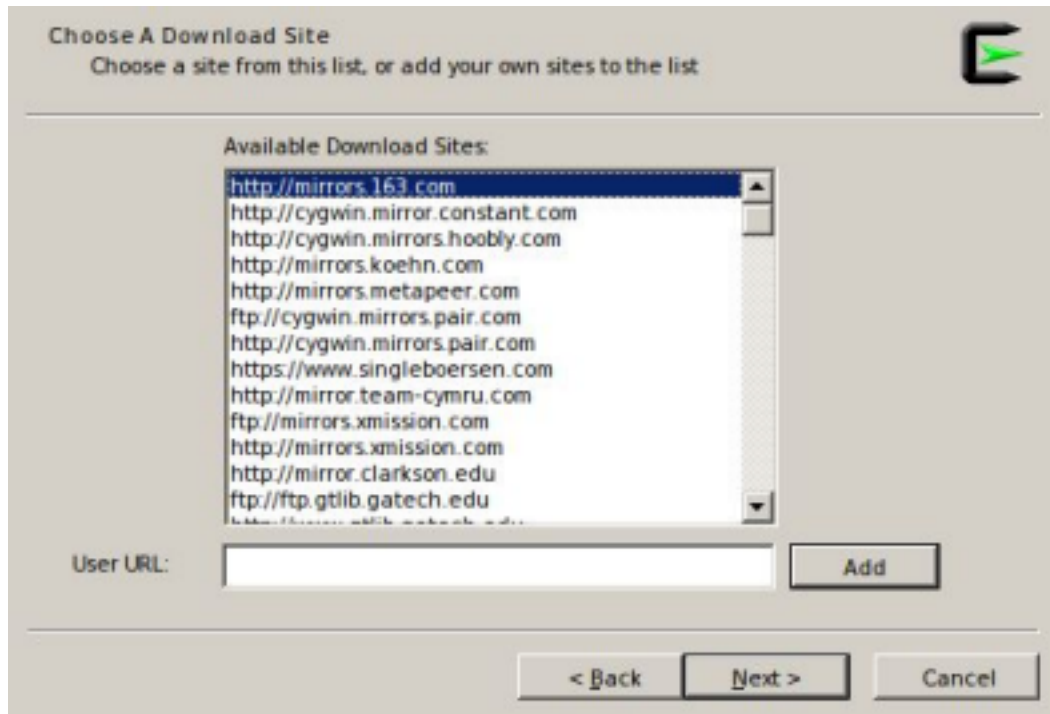

6. Choose a path where you would want the Cygwin packages to be installed. Click on browse and select your folder. Click next after selecting a folder

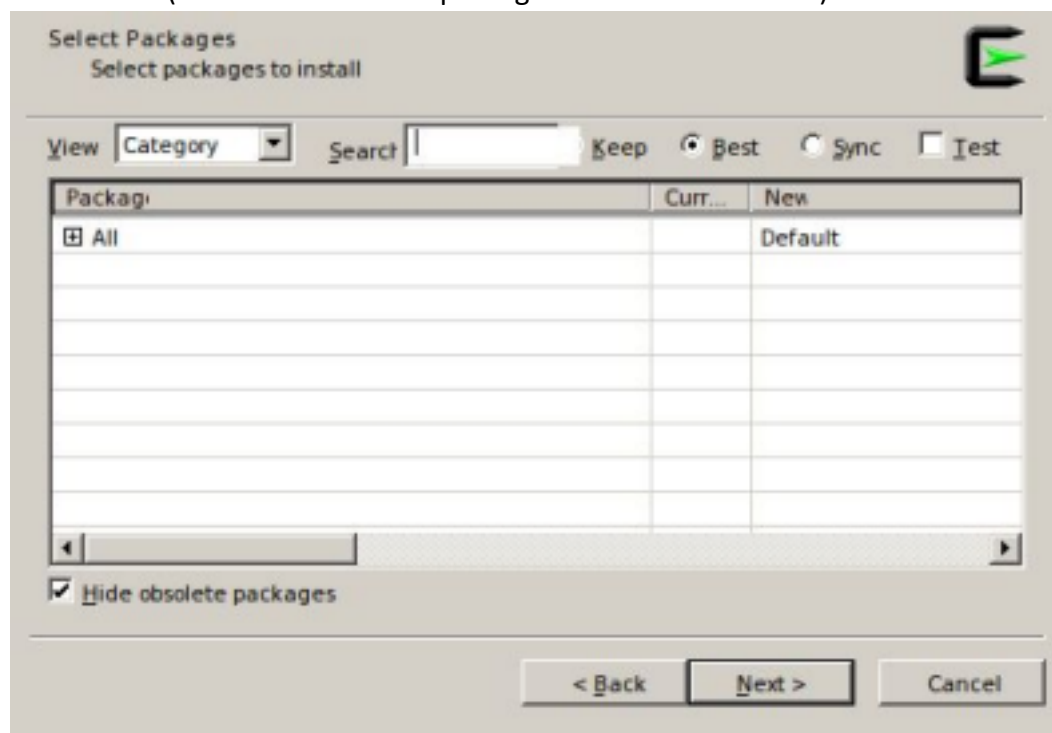

7. Click next

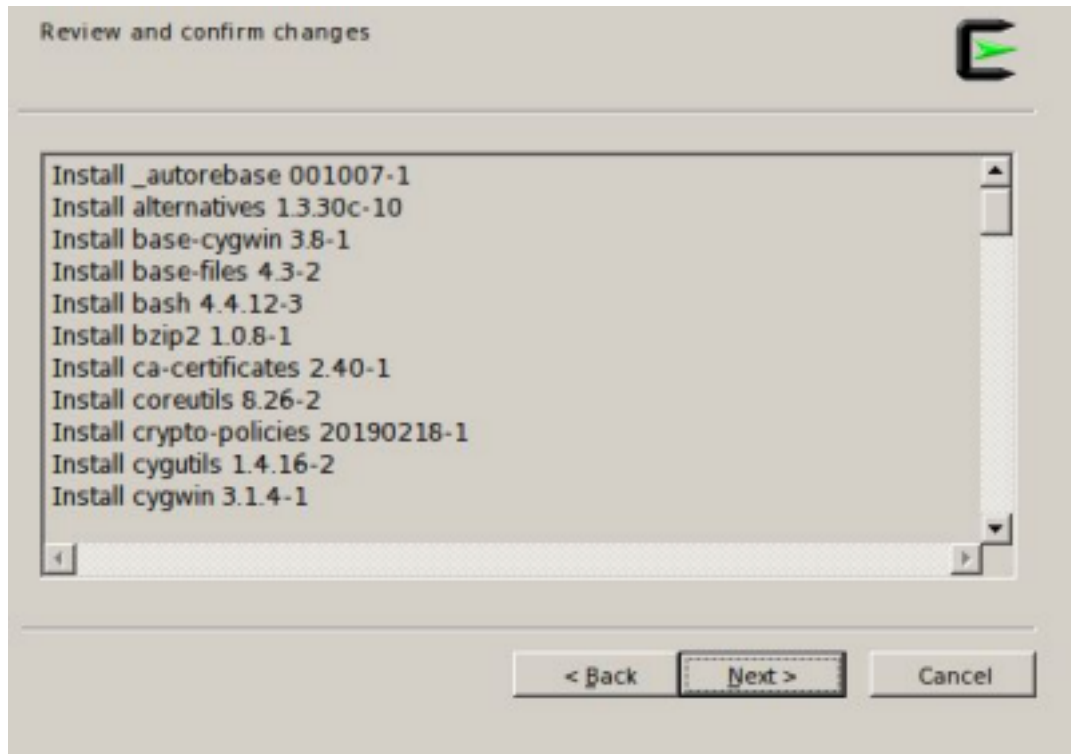

8. Select a mirror (any) and Click next

9. Click next (This will install base packages needed to run linux).

10. Click next

11. You will see the download/install progress. If no errors occur, you will be prompted to create a desktop icon and finish the installation.
